

GoMeetNow Web Conferencing Service Features List

Main Features	Descriptions	Supported Platforms
Everyone in a meeting can present his desktop	The meeting host can assign any attendee as the "presenter" of his computer screen to all meeting participants.	PC & Mac
Everyone in a meeting can control the presenter's desktop	The meeting presenter can pass his keyboard and mouse to one or all attendees in a meeting.	PC & Mac
Application sharing	To protect privacy, the meeting presenter can select one specific application to show to other attendees and hide everything else on the desktop.	PC
Real-time privacy protection	During a meeting, an application may accidentally open over the top of the application being shared. The meeting session will instantly pause until the foreign application is removed from the area being viewed by attendees.	PC
No download of any kind - Universal Attendance	Start a seminar. Your attendees can join your meeting within 5 seconds without downloading any kind of software including Java applets and Flash. Presently, only PC presenters are supported. Attendees can join from any platform with a full-fledged browser.	All platforms (PC, Mac, Linux, Unix, iPhone)
Pause meetings	You can pause a meeting during the middle to do something that you don't want shared	PC & Mac
Hide attendee list	The meeting host may hide the attendee list so that attendee names are not visible.	PC
Support multi-monitors	The system allows you to select one or all monitors to show to your attendees.	PC
Firewall & proxy friendly	Complies with existing firewall settings, without compromising security.	All platforms
Compatible with lockdown computers	Capable of working with lockdown computers	All platforms
Chat	Interactive meeting attendees can chat with each other. Chat sessions can be saved for later reference.	PC & Mac
File transfer	Attendees can send files or folders to every attendee or a specific attendee. Sending files automatically resumes when an attendee Internet connection reconnects.	PC & Mac

Change colors	Easily changes colors among 256 colors (for the fastest speed), 16-bit and 32-bit true color (for the best image quality). For example, for remote support, the 256 colors are adequate. For artwork with a client, choose 16-bit or 32-bit.	PC & Mac
Whiteboard	A whiteboard is available for drawing	PC & Mac
Annotation	Allows you to draw annotation marks anywhere on your screen to emphasize your points or ideas. You can save the annotation as JPEG files.	PC & Mac
Auto-reconnection	There are many reasons why your or your attendees' Internet connection could be lost in the middle of a meeting. Your meeting will continue as soon as the Internet reconnects. No need to restart or rejoin a meeting.	All platforms
Schedule Meetings	You can schedule single or recurring meetings. You can publish the scheduled meetings anywhere you want. The system displays scheduled meetings in both HTML and XML.	PC & Mac
Fit-to-screen display	Perfectly displays the presenter's screen on your screen, regardless of the presenter's screen size.	PC
Outlook and audio conferencing integration	When you send out invitation emails via Outlook for scheduled meetings, the system will automatically mark your calendar and have an option for your attendees to mark their calendars. The system also allows you to specify the audio conference call numbers and access code.	PC
International Language support	The current version supports English, Spanish, Chinese (Simplified & Traditional) and Japanese.	PC
Recording	Record screen and voice. A player is built in with recording data. One executable file has both data and a player.	PC
Firewall-protected internal meetings	When you start a meeting, you can tell the system whether it is an internal meeting, which only accepts attendees who come behind your firewall or come from those public IP addresses you specified during the system setup.	All platforms
Free audio conferencing	All participants in a meeting can attend an audio conference and get land-line quality. It is free and integrated.	All platforms
Unlimited registered users	There is no limit on the number of hosts you can register to use the system. It only limits the number of concurrent users using the system and the number of concurrent meetings.	All platforms
