

ViaRemote® for PCs

Automated, Off-Site Data Protection
For Your Entire Business

Company-Wide, On-Demand Data Protection For Every Desktop and Laptop

ViaRemote for PCs, our award-winning, fully-managed online data backup and recovery service, meets all critical data protection, business continuity, and financial requirements for both large enterprises and small to mid-sized businesses.

Data from all of your organization's desktops and laptops, wherever they are located, is automatically backed up on a daily basis through your existing network connection to a secure offsite storage facility. All of your mission critical data is centrally managed, securely protected, and easily recoverable, whenever it's needed.

ViaRemote for PCs delivers many important advantages including:

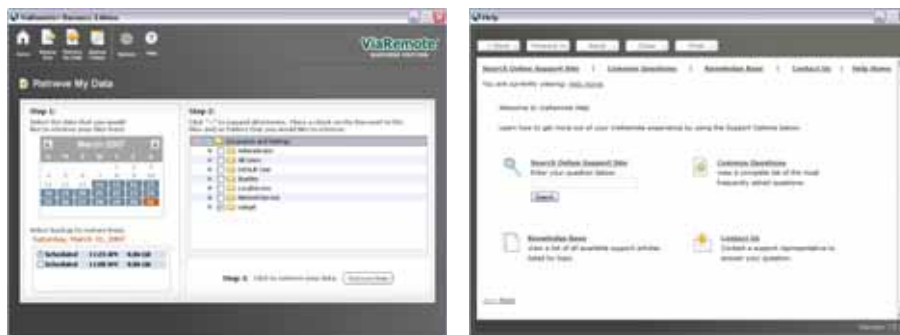

- **Quick and easy data retrieval.** End users can instantaneously restore data quickly at any time without any IT support. Our intuitive application interface lets users select single files or entire folders. And they can retrieve different versions of files from any backup performed during the last 30 days.
- **Automatic backup with virtually no impact on PC performance.** With ViaRemote, backups run entirely in the background to minimize impacts on performance. In fact, most of the time your end users won't even know that it's running. And it's all automatic.
- **Centralized IT management.** ViaRemote provides the status on all PC backups, tracks the total amount of data protected, and manages all account options from a single web-based portal. So your IT staff can stay on top of everything with a few mouse clicks.
- **Increased cost savings and ROI.** All equipment and support is provided for you at one of our disaster-proof data centers, eliminating the need for you to make capital investments in hardware or software. Pricing is based on the amount of data you protect, enabling you to control your costs because your capacity utilization is constantly optimized. And because ViaRemote automates your critical data protection operations, you can redeploy your people to other projects and significantly lower your backup and recovery management costs.
- **Higher service levels and assured continuity.** Backing up and recovering vital business data isn't your core business—it's ours. With capabilities worldwide, we support and manage all of your data protection requirements 24 hours a day, 365 days a year.
- **On-Demand Service.** ViaRemote is a pay-as-you-go service, making data backup and recovery costs predictable, affordable, and manageable. The service includes all the hardware, software, installation, configuration, and operational support to deliver a best practice based data protection service at a small fraction of the cost you might expect.
- **Web-based portal.** Arsenal's dynamic web-based portal provides you with important management functions and visibility into your service environment, status and trending.

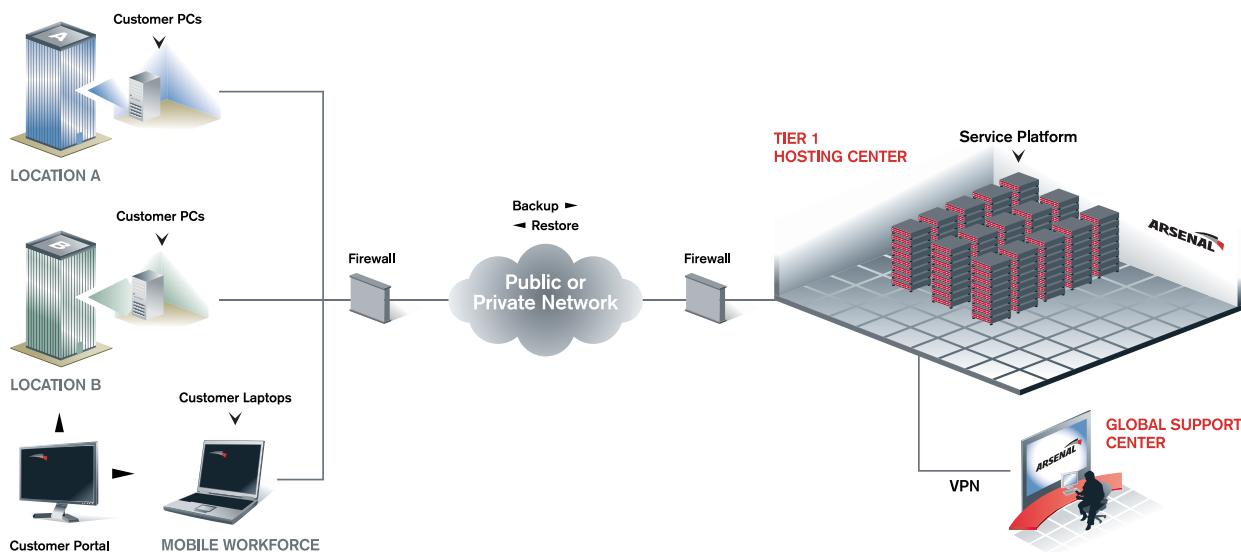

ViaRemote for PCs Main User Interface

Whether your end users work from home, on site or on the road, you need a desktop and laptop backup and recovery solution you can trust. You need ViaRemote for PCs.
