

## iPhone 2.0 configuration for Exchange

The iPhone 2.0 is able to sync with the Exchange server, by using ActiveSync. ActiveSync utilizes "true push" method of transferring data, syncing your emails, contacts, and calendar. \*\*The traditional Active Sync syncs e-mail, calendar, contacts, tasks, notes, and other data types BUT does not utilize the "push method"\*\*\*

---

1) Setup an e-mail account by selecting Settings > Mail, Contacts, Calendars > Add Account > Select Microsoft Exchange

---

### 2) Configuration Settings

Email address: (your email address)

Server: mail.securembx.com

Username: [user@domain.com](#) (your email address)

Password: (your password)

Domain: *this is optional - please leave this box empty*

3.) Select what you would like to be synced to the phone from the Exchange server and select **Save**.
